EnviroKure Launches Innovative Biofertilizer: PhylloZone

Philadelphia, PA – EnviroKure, a leader in sustainable agricultural solutions, is proud to announce the launch of its latest foliar product, **PhylloZone**. This innovative product is an enhanced version of EnviroKure’s popular BioStim, specifically designed to improve the phyllosphere—the total above-ground surface of a plant, including leaves, stems, and other aerial parts—offering even greater benefits to farmers.

PhylloZone builds on the proven effectiveness of BioStim by boosting microbial consortia and reducing the application rates to just 1 gallon per acre. It can be used alone or in combination with most crop inputs, providing flexibility for farmers. **PhylloZone** guarantees levels of the following beneficial bacteria:

- **For Nitrogen- fixation:** Azospirillum lipoferum, Azospirillum brasilense, and Paenibacillus polymyxa
- **For promoting plant growth:** Bacillus subtilis, Bacillus amyloliquefaciens, Pseudomonas fluorescens
- **For enhancing stress tolerance:** Bacillus pumilus, Bacillus halotolerans:

"We are excited to introduce **PhylloZone** to the market," said Joe Steck, President of EnviroKure. "Our mission is to provide scalable and sustainable solutions for the agriculture industry, and **PhylloZone** is a significant step in that direction. By using this innovative biofertilizer, farmers can achieve better results while sustainably improving their bottom-line."

"Late season foliar applications offer a range of benefits that can enhance plant growth, increase yields, and improve nutrient utilization," according to Dr. Nasser Syed, EnviroKure’s principal research scientist. "This innovative biofertilizer is powered by its complex composition, making it an excellent foliar addition to your program."

PhylloZone is now available for purchase in IBC totes and bulk through EnviroKure’s distribution network. For more information about **PhylloZone** and how it can benefit your farming operations, please visit (<https://www.envirokure.com>) or contact our customer service team at 215-289-9800.

About EnviroKure

EnviroKure develops disruptive technologies and markets products that harness the untapped potential of chicken manure. Its patented, commercially proven waste-to-value technology produces highly effective liquid biostimulants and biofertilizers from raw chicken manure. These

products are proven to enhance plant growth and productivity, build healthy soil, and reduce the need for chemical fertilizers and other crop inputs. EnviroKure's technologies and products also enhance carbon sequestration and decrease emissions, thereby reducing the carbon footprint on farms.

EnviroKure's bioconversion platform extracts nutrients and beneficial microbes from chicken manure, transforming it into high-value crop inputs that meet stringent USDA National Organic Program and FDA Food Safety standards. Produce growers value EnviroKure products for their consistent, cost-effective results and the flexibility to use them without restrictions throughout the growing season.
